

Dentaco®

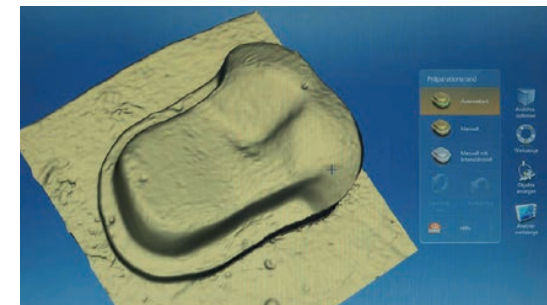

scan' liquid

- Totally new developed Scanning-Spray, aerosol-free thanks to a special pump-atomizer
- Provides a super-thin, good adhering and even matting of all intraoral surfaces
- Thixotropic: When applied scan' liquid is high viscous and sticky, when air dried it flows thin and is evenly spread over the entire working field
- Just push 4-5 times the atomizer and distribute the powder layer with a strong stream of air from the multifunctional syringe – the scan can be taken seconds after matting
- Residues of saliva or blood cannot disturb the scanning anymore, they are removed with the strong drying stream of air
- Extremely economic and yielding – 150-200 single tooth applications per bottle
- Developed in cooperation with the Universities of Essen (Chemistry) and Witten-Herdecke (Dental) – patent pending
- Extensively clinically tested and proven
- Up to 5 times more productive than conventional scanning sprays
- Without propellant gases

Atomizer (30 ml) No. 400 200
